

Q: Explain REST architecture.

A: REST is an architectural style using HTTP methods (GET, POST, PUT, DELETE) for stateless communication between client and server.

Q: What are HTTP methods?

A: GET (read), POST (create), PUT (update), DELETE (remove), PATCH (partial update).

Q: What is Middleware?

A: Middleware are components in pipeline handling requests/responses like logging, auth, error handling.

Q: Explain Routing.

A: Routing maps incoming requests to controller actions using URL patterns.

Q: How to secure API?

A: Use JWT, OAuth, HTTPS, CORS, validation, authentication and authorization.

Q: What is Model Binding?

A: It maps HTTP request data to action method parameters automatically.

Q: What is Dependency Injection?

A: Design pattern to inject dependencies, improves testability and maintainability.

Q: Error Handling?

A: Use middleware, exception filters, and proper HTTP status codes.

Q: What is JWT?

A: JSON Web Token used for secure authentication between client and server.

Q: What is CORS?

A: Cross-Origin Resource Sharing allows/restricts API access from different domains.

Q: What is IActionResult vs ActionResult?

A: IActionResult is interface, ActionResult is class with more flexibility.

Q: How to optimize API?

A: Use caching, async calls, pagination, efficient queries.
